FONECTA CHALLENGE · SINCE AI HACKATHON 2026

Connect Suggests, Customer Approves

Connect finds the hours that are wrong. The customer fixes them with one tap.

The highlighted step belongs to the customer. Connect does the rest.

Team MVP Engineers · Turku · 6 to 8 November 2026

1 Detect | 2 Suggest | 3 Contact | 4 Decide | 5 Apply

STEP 1 OF 5 · CONNECT

Detect: spot the hours that are wrong

90.6%

of special days repeat last year's exact hours

So the clearest sign is last year's exception with nothing added this year.

1.75x

phone calls on days shown open but truly closed

Against 1.26x when the listing is right. Closure reviews are 79% precise, user edits 90%.

55%

truly closed where 90 to 100% of peers closed

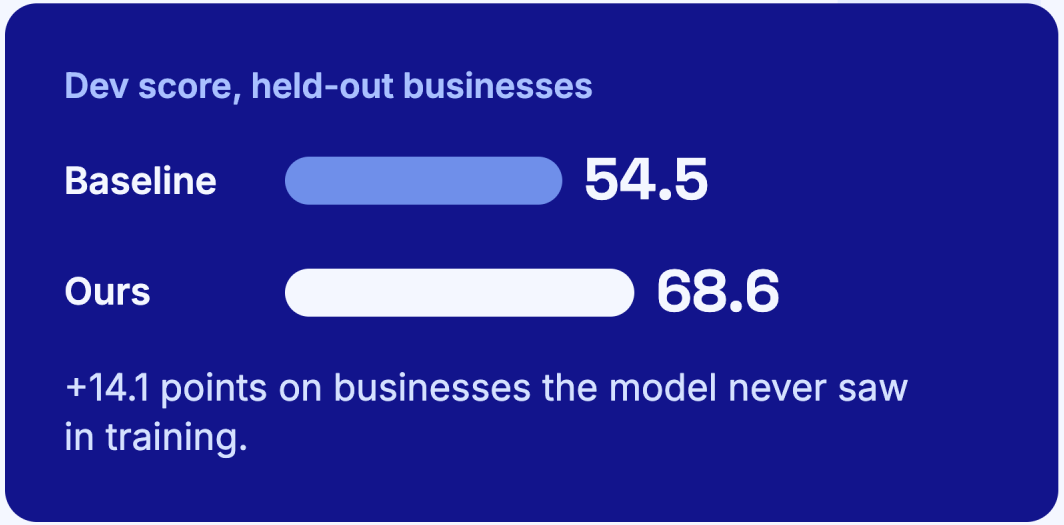

Similar businesses are a starting point for customers with no history, never proof.

We suggest only when the odds of being right clear break-even, and stay quiet otherwise.

STEP 2 OF 5 · CONNECT

Suggest: the right hours, and why

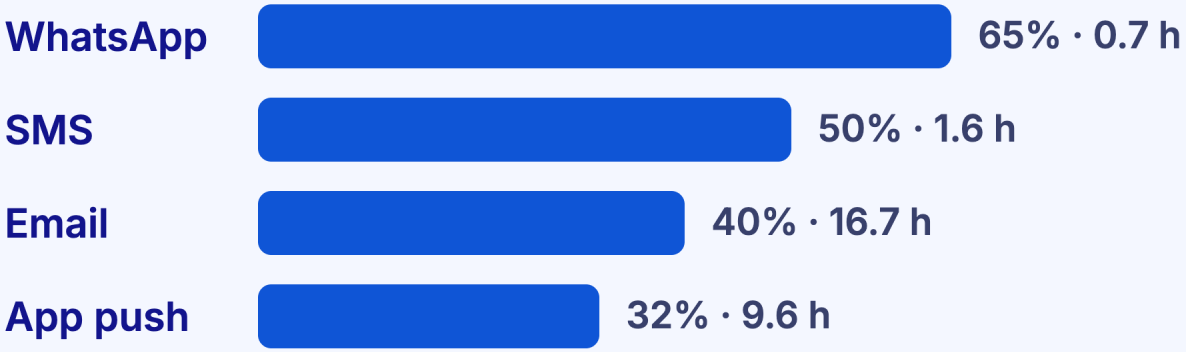

1. **Score every action by expected points.** A right suggestion earns +1, a wrong open or closed call costs 1.
2. **Act only above break-even.** Closed needs better than 50% odds. New hours need at least a 25% chance of being exactly right.
3. **Give the reason with every suggestion.** What Google shows now, and why that is probably wrong.

STEP 3 OF 5 · CONNECT

Contact: reach them where they reply

2025 pilot: share of suggestions that got a reply, and median time to decide

Channel matters: replies range from 32% to 65%, and the time to decide from under an hour to most of a day.

How each message is sent

- The customer's own channel, language and best contact window
- Finnish, Swedish, Norwegian or English
- Standing permissions and opt-outs are respected

1 Detect | 2 Suggest | 3 Contact | **4 Decide** | 5 Apply

STEP 4 OF 5 · CUSTOMER

Decide: one tap, no login

ILLUSTRATIVE MESSAGE

Hi Café Linna!

Christmas Eve is on Thursday 24 Dec. Last year you were open 10 to 14, but no exception hours have been added this year, so Google shows your regular hours (9 to 18).

We suggest: Thu 24 Dec, 10 to 14

Approve | **Edit** | **No thanks**

2025 pilot: what owners did with 3,031 suggestions

- 53% no reply
- 41% accepted
- 3% edited
- 3% declined

Accepted suggestions were always right.

Silence is never approval: nothing is applied without a yes.

Standing permission can cover recurring changes.

STEP 5 OF 5 · CONNECT

Apply: write it, then say where it shows

5

The customer taps Approve → The change is written to the Yext sandbox as holiday hours → A confirmation lists each channel and when it goes live

Within minutes	Google Search and Maps (2 min), Finder.fi, Hitta.se, Facebook (10 min)
Within an hour	Fonecta Caller (1 h)
Within a day	Bing, Eniro, 1881.no, Gule Sider (1 day)
Within days	Apple Maps, Waze (2 days), Tripadvisor (3 days)
Within a week	Foursquare and AI assistants (7 days)

Typical update speed per channel, from the listings data

WHAT'S NEXT

Our next step: Leveraging usage to determine churn

Turning a cost center into potential revenue opportunities

01

Usage signals

How customers reply, how fast they decide, whether they approve, edit or ignore, and who grants standing permission.

02

Churn risk

The less a customer engages, the less value they get from Connect. Quiet customers are flagged before they leave.

03

Revenue action

Show the value in visits protected, offer paid auto-update with standing permission, and time save and upsell offers.

53%
of 2025 pilot suggestions got no reply

1.5x to 1.8x
search demand on peak special days

36%
of at-risk views sit in the top 10% of needed changes

Hypotheses to validate with Connect's real usage data

CONNECT SUGGESTS, CUSTOMER APPROVES

Thank You
